## Risk Management

NSK works to build a risk management system based on clearly stipulated fundamental principles aimed at effectively enabling global Group management and internal control functions. Every year, all the business sites perform their own risk assessment, classifying, analyzing, and evaluating risks in accordance with changes in the social environment, the frequency of risk occurrence, the size of impact, and other factors to identify risks that should be addressed. The Corporate Planning Division Headquarters and the Finance Division Headquarters coordinate with business and regional and functional headquarters regarding risks at each division and each business site, which are managed in accordance with prescribed reporting systems. While putting in place preventive measures, the Company devises steps to swiftly and appropriately act in the unfortunate event a risk is manifested, and then works to mitigate the impact.

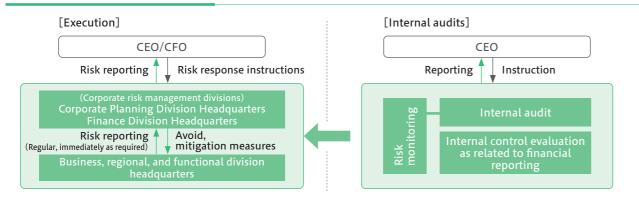

In addition, the internal audit division coordinates with the Audit Committee to monitor the tasks carried out by executive divisions, build an internal control system, and audit operational status.

As NSK's business activities spread to more areas, the range of anticipated risks widens. The Company has identified 10 types of representative risks deemed of high importance according to what they entail and likelihood of occurring, their degree of impact, and mitigation measures. Among the risks we present, the three types outlined in 1, (6), and (7) could lead to business opportunities for NSK, and we include details concerning these as well.
