## SUPER-TF FOUR-ROW CYLINDRICAL ROLLER BEARINGS

FOR BACK-UP ROLLS IN ROLLING MILL STANDS

STAY IN MOTION. STAY IN CONTROL.

## MADE WITH METTLE

### BEARINGS FOR STEEL AND METALS MACHINERY

Massive loads. Intense heat. Ultra low speeds. Staggering shock loads, misalignment, and contamination from mill scale and water vapor.

From iron and steel making through rolling and forming mills, the operating conditions of the entire process are severe. The reliable, uninterrupted performance of rolling components is critical for accelerated production.

For NSK, our product development and design is focused squarely on withstanding the manifold operating stresses of these applications with:

- › increasing capacities for high loads and high speeds
- › advanced materials for durability, wear resistance and longer life
- › lubrication and seal technology for smooth and clean running

Our product solutions are designed to optimize the performance of machinery and equipment, to assure predictable reliability and to deliver total cost-efficiency.

**OUTSTANDING PERFORMANCE.  
ENGINEERED IN.**

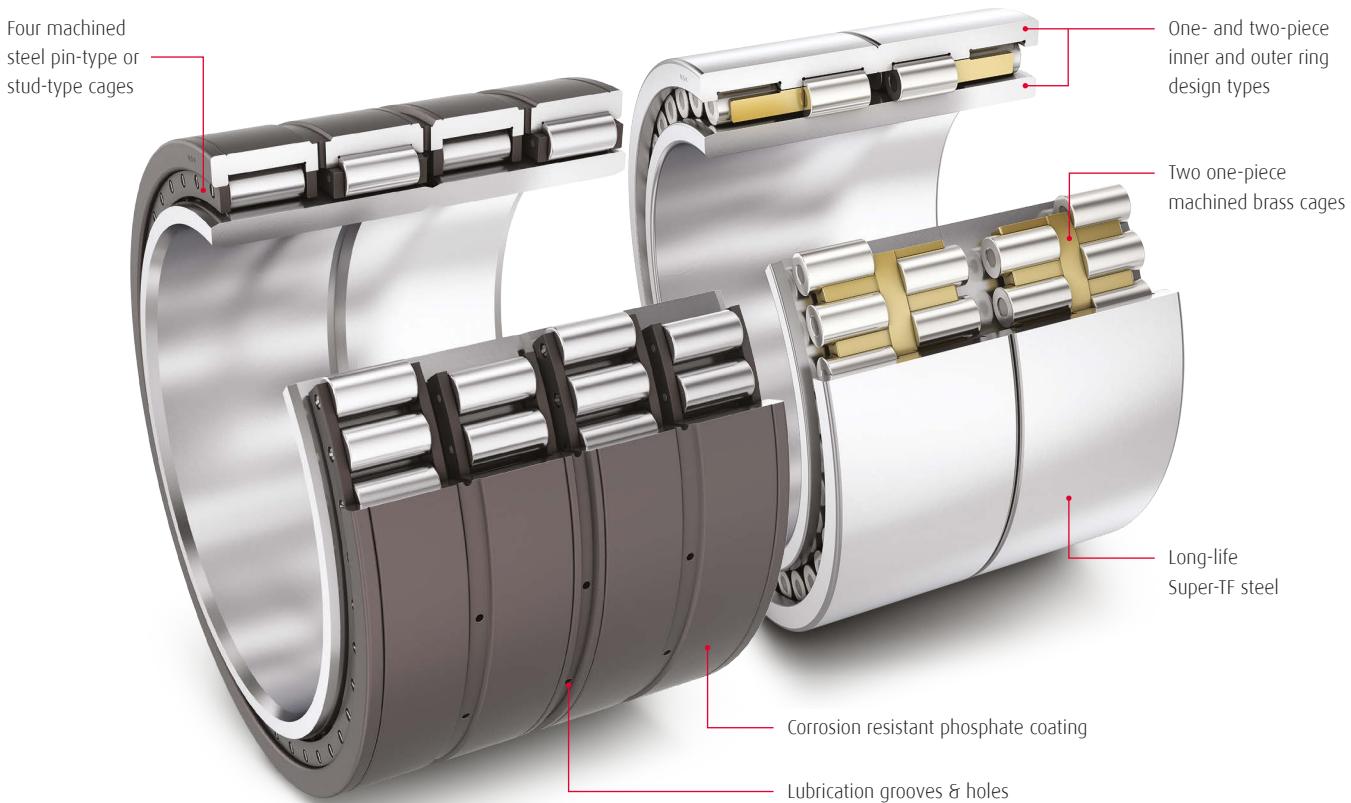

NSK four-row cylindrical bearings are engineered specifically to accommodate the extremely heavy and impact loads - while running smoothly and accurately - in the back-up rolls of rolling mill stands. Amid particularly harsh operating conditions, NSK's long-life Super-TF steel provides significantly higher durability to counteract the heavy rolling load and the high probability of compromised bearing lubrication.

Available in a large range of design types with high-performance cage options, and manufactured to precision tolerances, NSK four-row cylindrical bearings are optimized to deliver high capacity and high accuracy for uninterrupted and precise rolling.

# DESIGN AND OPERATING ADVANTAGES

NSK four-row cylindrical bearings are engineered specifically to accommodate the extremely heavy and impact loads in the back-up rolls of rolling mill stands, deliver high capacity and high accuracy for improved precision in rolled steel.

## DESIGN FEATURES

- › Special design high capacity four-row cylindrical roller bearing
- › With long-life Super-TF steel for dramatically longer service life under contaminated operating conditions
- › Wide range of design configurations with one- and two-piece inner or outer rings, integral outer ring ribs, outer ring spacers and outer flange rings
- › With cylindrical and tapered bores
- › Available with machined brass or machined steel cages
- › Corrosion resistant phosphate coating option for designated bearing surfaces
- › With outer ring lubrication groove and hole features
- › Precision tolerances for high rotational accuracy
- › Available with special, custom, C3 and C4 radial internal clearance

# HIGH PERFORMANCE CAGES

**NSK**

## PRESSED STEEL CAGE

- › Heavy duty, wear-resistant design for superior performance in applications subject to heavy and/or impact loading
- › Two roller-guided, one piece cages in each bearing

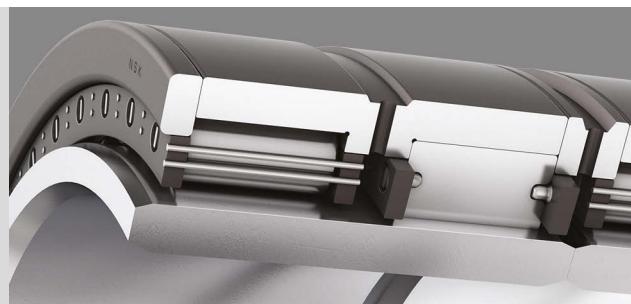

## PIN-TYPE CAGE

- › Four high strength machined steel cages in each bearing
- › Cage design allows for optimal number of rollers / capacity
- › Rollers are through-drilled and retained in the roller-cage assembly with pins

## STUD-TYPE CAGE

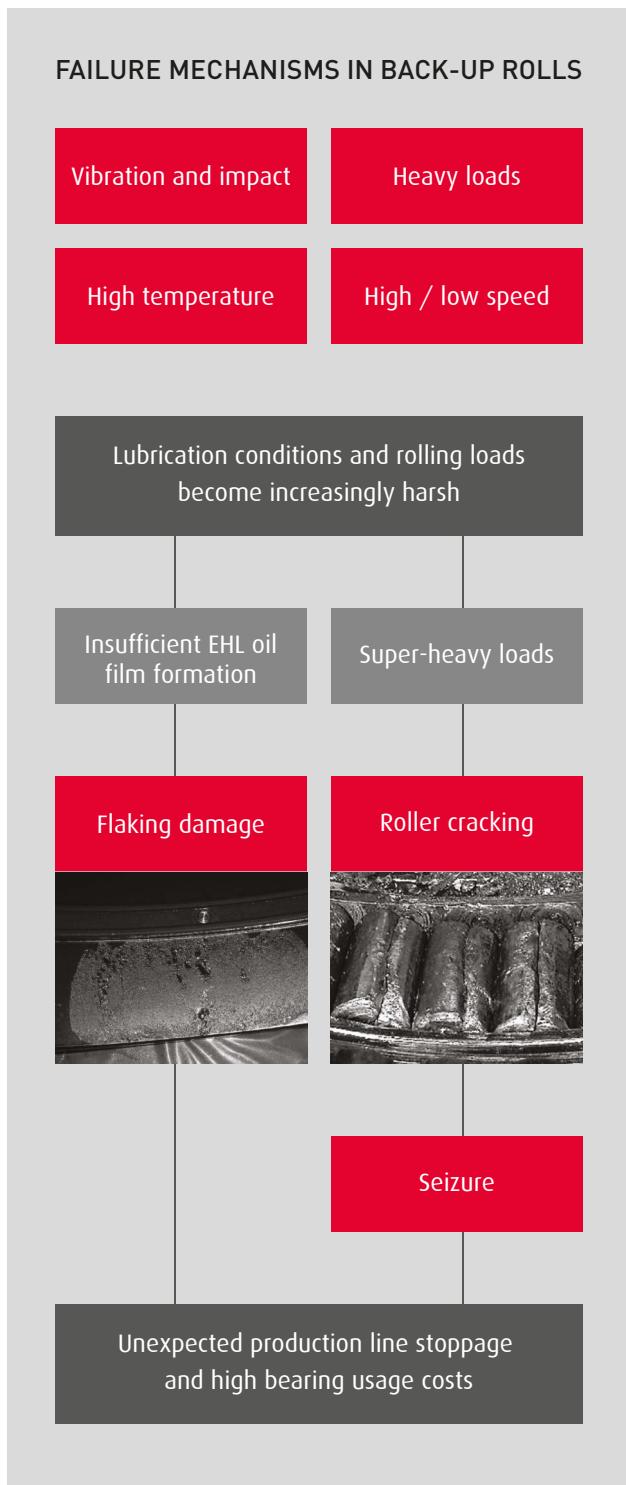

- › Four high strength machined steel cages in each bearing
- › Rollers are retained in the roller-cage assembly with studs
- › Solid rollers mitigate the risk of roller cracking damage under continuous heavy loads

## PROVEN ADVANTAGES

- › Exceptionally high load carrying capacity from four-row design, optimized in machined steel cage designs with larger rollers
- › Suitable for high and low speeds, accommodating rapid acceleration and deceleration
- › Higher reliability and longer operating life with Super-TF steel, reducing bearing replacement and maintenance intervals
- › High accuracy for improved precision in rolled steel

# HIGH PERFORMANCE FACTOR: SUPER-TF STEEL

## SUPER-TF (STF) MATERIAL TECHNOLOGY

Durability is crucial in back-up roll bearings in rolling mill stands. Four-row cylindrical roller bearings must endure heavy and impact loads, high temperatures, high / low speeds and accelerations with reliable, uninterrupted performance to achieve and augment production capacities.

NSK's Super-TF (STF) series four-row cylindrical roller bearings are designed to deliver outstanding durability in these environments. Through advanced material engineering and heat treatment technology, they perform with superior resistance to wear, seizure and heat.

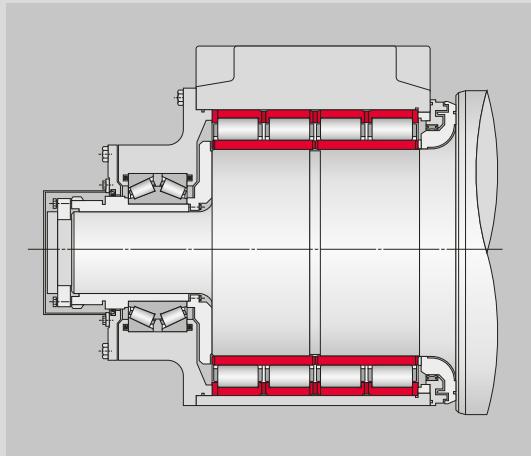

Material composition	Containing appropriate levels of chromium and molybdenum for increased hardness
Special heat-treatment	Optimized dispersion of finer carbide and carbonitride particles
Retained austenite	Alleviation of the stress concentration on the contact surface

In severe, contaminated, and boundary-lubrication conditions, Super-TF bearings optimize throughput, reduce maintenance intervals and deliver total cost-efficiency

## Field Test: Comparison of bearing life

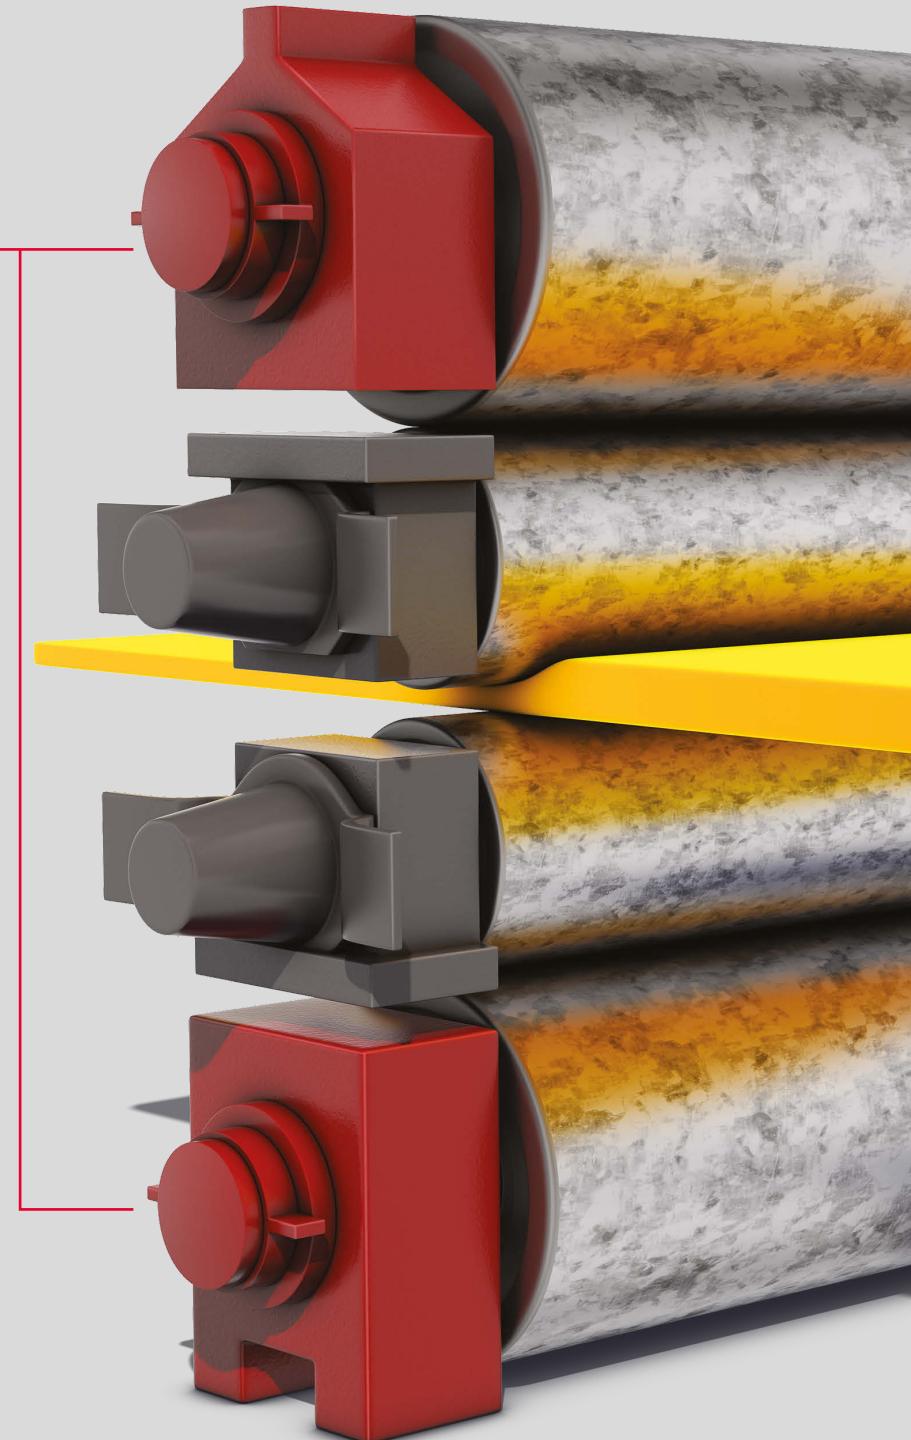

Conventional steel	1
Super-TF steel	2 times longer life

## ARRANGEMENT FOR BACK-UP ROLLS

**Above:** Because four-row cylindrical roller bearings can accommodate only radial loads, they are used in combination with a bearing to accommodate axial loads, such as a double-row tapered roller bearing

**Right:** Tandem hot rolling stand, with back-up rolls in top and bottom positions (with red chocks)

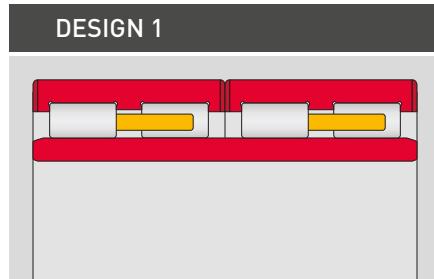

# BASIC DESIGN TYPES AND COMPONENTS

## FUNDAMENTAL VARIANTS OF DESIGNS

NSK four-row cylindrical roller bearings are available in a large range of design types, represented here in their basic structure. Essential differences between design types include:

- › Inner and outer rings may be in one or two pieces
- › Outer rings will have various configurations of ribs
- › Outer flange rings and/or spacer rings may be integral to the design
- › Cage material may be machined brass or steel

Although not shown, specific design types of NSK four-row cylindrical roller bearings are available with tapered bores as well as requirements to accommodate oil mist lubrication (with outer ring fittings and o-rings). Contact NSK for specifications and design options.

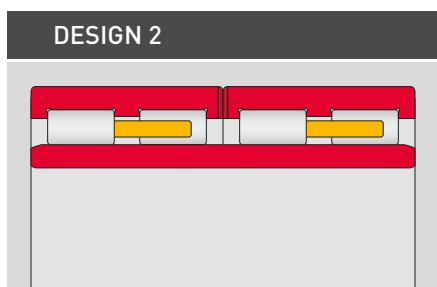

**DESIGN 1**

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs and inner / outer face scallops
- › 1 inner ring - with no ribs

### CAGE

- › 2 machined brass cages - roller guided

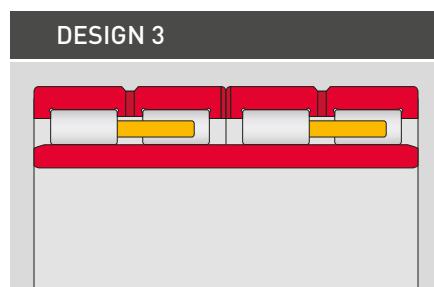

**DESIGN 2**

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs and inner face scallops
- › 1 inner ring - with no ribs

### CAGE

- › 2 machined brass cages - roller guided

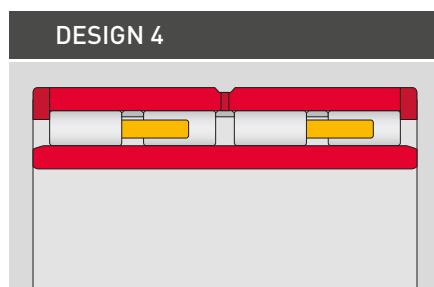

**DESIGN 3**

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs, lubrication groove and holes, and inner face scallop
- › 1 inner ring - with no ribs

### CAGE

- › 2 machined brass cages - roller guided

**DESIGN 4**

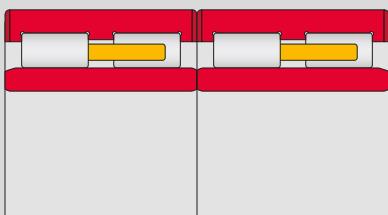

### INNER AND OUTER RINGS

- › 1 outer ring - with lubrication groove and holes; no ribs
- › 2 outer flange rings
- › 3 guide rings
- › 1 inner ring - with no rib

### CAGE

- › 2 machined brass cages - roller guided

## DESIGN 5

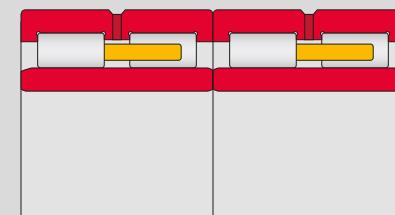

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs and inner / outer face scallops
- › 2 inner rings - with no ribs

### CAGE

- › 2 machined brass cages - roller guided

## DESIGN 6

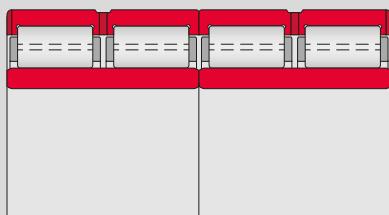

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs and lubrication groove and holes
- › 2 inner rings - with no ribs

### CAGE

- › 2 machined brass cages - roller guided

## DESIGN 7

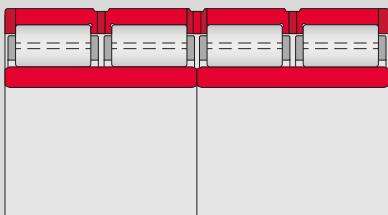

### INNER AND OUTER RINGS

- › 2 outer rings - each with 3 integral ribs lubrication groove and holes, and outer face scallops
- › 2 inner rings - with no ribs

### CAGE

- › 4 machined steel cages - pin type
- › Through-drilled rollers

## DESIGN 8.1

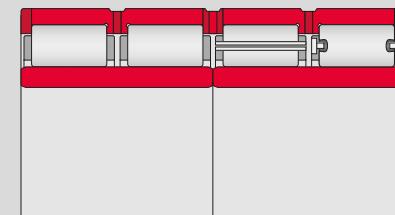

### INNER AND OUTER RINGS

- › 2 outer rings - each with 1 integral rib and lubrication groove and holes
- › 2 outer flange rings
- › 1 spacer ring with lubrication features
- › 2 inner rings - with no ribs

### CAGE

- › 4 machined steel cages - pin type
- › Through-drilled rollers

## DESIGN 8.2

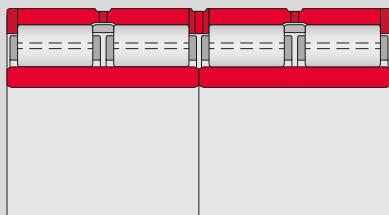

### INNER AND OUTER RINGS

- › 2 outer rings - each with 1 integral rib and lubrication groove and holes
- › 2 outer flange rings
- › 1 spacer ring with lubrication features
- › 2 inner rings - with no ribs

### CAGE

- › 4 machined steel cages - stud type
- › Solid rollers

## DESIGN 9

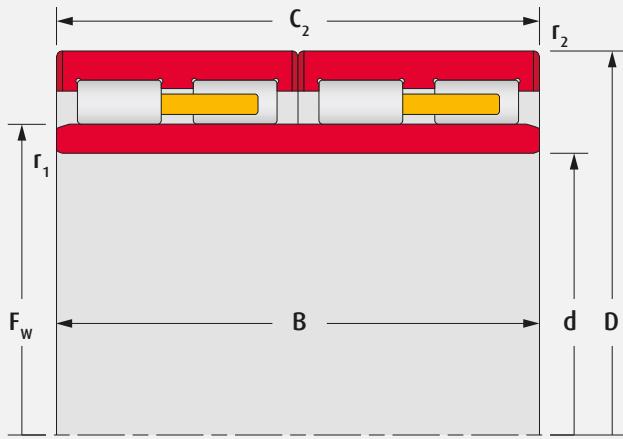

### INNER AND OUTER RINGS

- › 2 outer rings - each with 1 integral rib and lubrication groove and holes
- › 2 outer flange rings
- › 1 spacer ring with lubrication features
- › 2 guide rings
- › 2 inner rings - with no ribs

### CAGE

- › 4 machined steel cages - pin type
- › Through-drilled rollers

### Back-up Roll Bearing Arrangement

Four-row cylindrical roller bearings can accommodate only radial loads. For back-up rolls in rolling mill stands, they are used in combination with a bearing to accommodate axial loads, such as a double-row tapered roller bearing shown.

BASIC BEARING NO.	BEARING DIMENSIONS mm							BASIC LOAD RATINGS kN		DESIGN

Parts shown are bearing types with cylindrical bore. For tapered bore options, contact NSK.  
Refer to pages 8 & 9 for "Design" types.

Design type with suffix "M" indicates bearings for oil mist lubrication.  
Design type "SP" indicates bearings of special design - contact NSK for specifications.

# DESIGNATION SYSTEM

## FOUR-ROW CYLINDRICAL ROLLER BEARINGS

DESIGNATION	ATTRIBUTE
Special Material Designation	standard bearing steel
	long-life Super-TF™ steel
Bore Reference Number	bearing bore diameter expressed in mm
Bearing Type	four-row cylindrical roller bearing
Bearing O.D. Reference	multiply by 10 for bearing outer diameter within a 10 mm range eg. "87" = 870 - 879.99 mm
Tolerance Type	metric
	inch
Sequence Number	internal - assigned by NSK
Carburization	entire bearing
Surface Treatment	corrosion resistant phosphate coating

DESIGNATION	ATTRIBUTE
Radial Internal Clearance	CRXXX special internal clearance when parts are co-ground; expressed in microns
	CGXXX custom internal clearance; expressed in microns
Tolerance Class	C3 greater than normal clearance
	C4 greater than C3 clearance
Tolerance Class	P5A special precision tolerances
	P4A

## IMPROVEMENT PAYS

### END-TO-END SERVICE DELIVERS CUSTOMER SUCCESS

Improvement never ends. And we never stop looking for better ways to support our customers in a complete, collaborative and continuous way. The focus of NSK isn't simply on a quick fix for immediate gain – it's about incremental and sustainable improvement to deliver long-term benefits.

When NSK is on-site, we're there to understand our customers' challenges and identify problems contributing to frequent bearing replacement, breakdowns caused by poor specification, high energy costs from inefficient product selection and lost production because of downtime. We collaborate with our customers to institute an **Asset Improvement Program (AIP)** that encompasses process and maintenance management, diagnostic and educational support to deliver measurable gains in output and cost-efficiency.

With NSK, our customers embark on a critical path to realizing improvements in equipment, productivity, people and financial performance.
