

NSK Linear Guides™

High-Rigidity Series

RA/RB Model Roller Guides

Thanks to NSK's advanced analysis technologies, RA/RB roller guides realize super-high load capacity and rigidity. RA models with interchangeable rails and roller slides provide set preload and accuracy for custom combinations, while the RB model with low mounting height facilitates compact machine design.

The fruits of NSK's comprehensive technologies: RA/RB roller guides suit a wide range of applications

RA/RB roller guides represent the culmination of NSK's extensive experience in roller bearings and linear guide technologies.

Their optimized designs take full advantage of our unique expertise to realize smooth motion and super-high load capacity, rigidity, and motion accuracy. With their capacity to handle a variety of applications, RA/RB models help support higher machine performance to meet your needs.

Helping to achieve higher machine performance: Features of RA/RB roller guides

Super-Long Life

Super-high load capacity

RA/RB roller guides are among the best in the world—with unprecedented operating life thanks to their high load capacity.

Maintenance-free

Installing the NSK K1™ lubrication unit assures long-term, maintenance-free operation.

Highly dust resistant

Highly dust-resistant seals come equipped as standard to prevent the entry of foreign matter and ensure that performance does not worsen over time.

Help Advance High-Precision Manufacturing

Super-high rigidity

Super-high rigidity provides high-precision manufacturing.

Super-high motion accuracy

Coupled with NSK's unique design approach, the vibration caused by roller passage has been substantially reduced. This helps improve the quality of machined surfaces.

Smooth motion

The installation of a retaining piece achieves smooth motion, resulting in stable positioning accuracy.

Ideal Across Fields

Complete lineup

A wide lineup of sizes, including low-profile varieties, are available to match your application needs.

Standardized mounting dimensions

Outside dimensions and mounting dimensions conform to commonly used standards, allowing RA roller guides to be used without design changes (see Pages 17 and 18 for details).

Super low-profile RB model

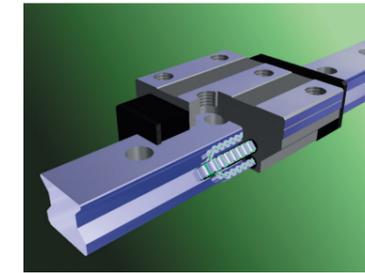

With a low mounting height, the RB model supports compact machines and equipment downsizing.

Low friction

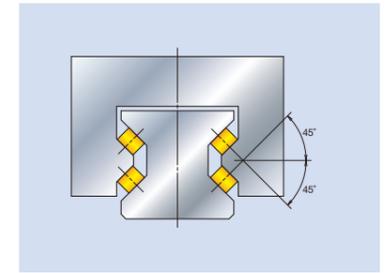

Using rollers for rolling elements suppresses dynamic friction.

Optimal Design

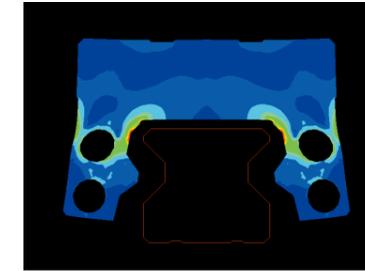

NSK conducts comprehensive and detailed performance simulations of roller guides by combining analysis and tribology technologies cultivated over many years of experience. These advancements have allowed us to attain thoroughly optimized designs down to the dimensions and shapes of the guide components.

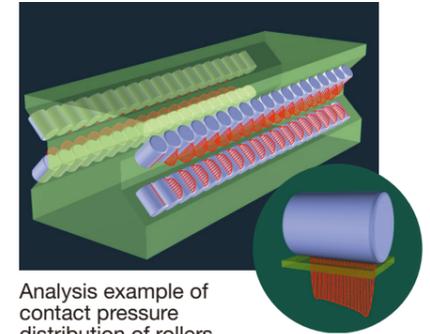

Smooth motion by use of retaining pieces

Balanced four-directional equal load specification

Example roller slide deformation analysis

Analysis example of contact pressure distribution of rollers

Interchangeable Types

RA25, 30, 35, 45, 55, 65

Freely Match Rails and Roller Slides

Accuracy interchangeability

High-precision (PH) grade running parallelism is maintained even with custom combinations of rails and roller slides.

Preload interchangeability

Custom combinations of interchangeable roller slides and rails provide the proper preload to maintain rigidity.

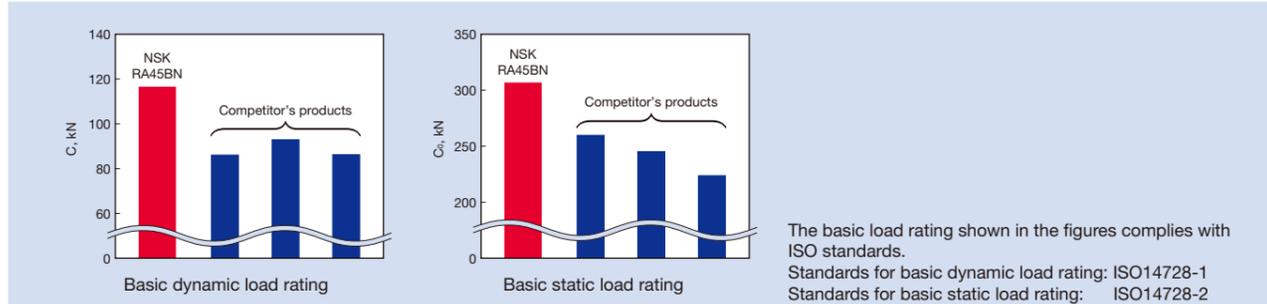

Custom matching

Rails and roller slides can be freely matched to suit the application.

Features

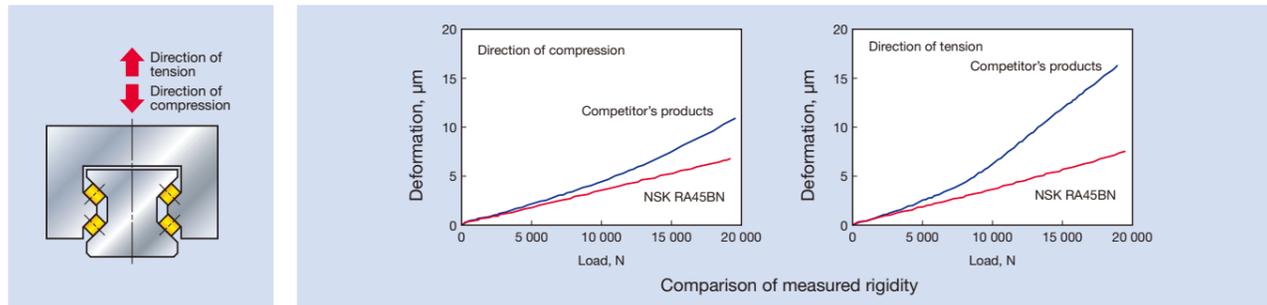

1. Super-high load capacity

Thanks to analysis technology, we installed rollers with the largest possible diameter and length within existing standard cross-section dimensions in a logical layout to realize super-high load capacity. This design achieves super-long life and is capable of handling impact loads.

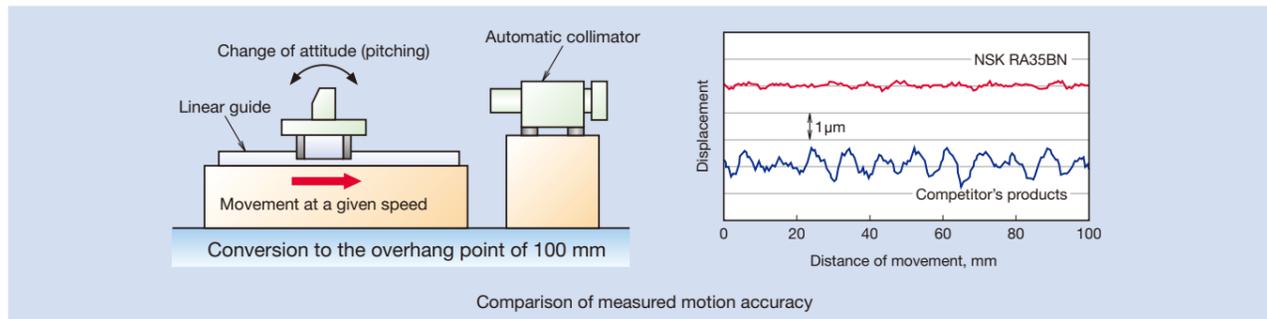

2. Super-high rigidity

Using NSK's advanced analysis technology, we pursued a complete, optimal design, down to the detailed shape of the roller slides and rails, thereby realizing super-high rigidity superior to that of competitors' roller guides.

3. Super-high motion accuracy

NSK has developed its own unique method of simulating rolling element passage vibration and designing optimal roller slide specifications for damping. These developments have dramatically enhanced roller slide motion accuracy for the RA/RB models.

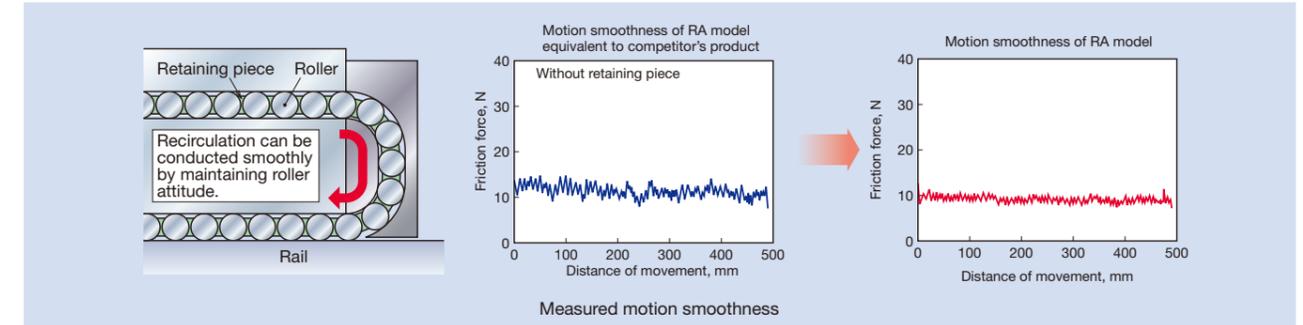

4. Standardized mounting dimensions

Outside dimensions and mounting dimensions conform to international standards, allowing RA roller guides to be used without design changes (see Pages 17 and 18 for details).

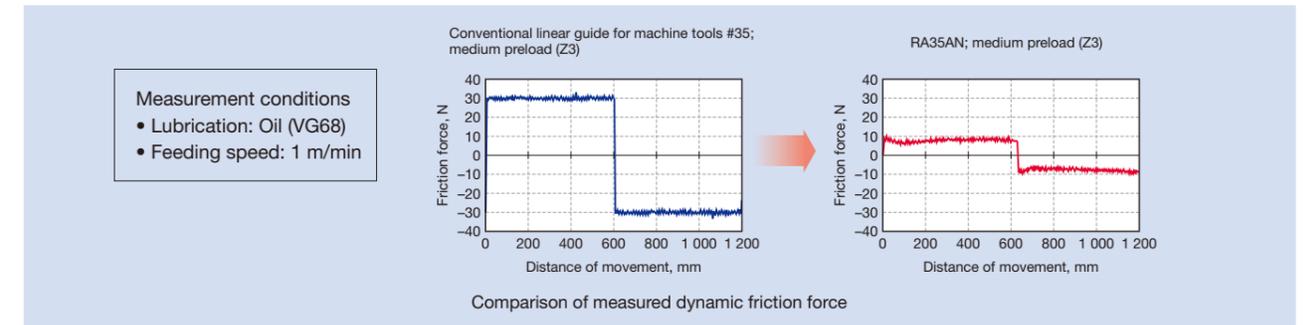

5. Smooth motion

Installing a retaining piece between rollers and restraining the skew peculiar to roller bearings achieve smooth motion. The reduction of friction variation provides stable tracking in the complicated trajectory control.

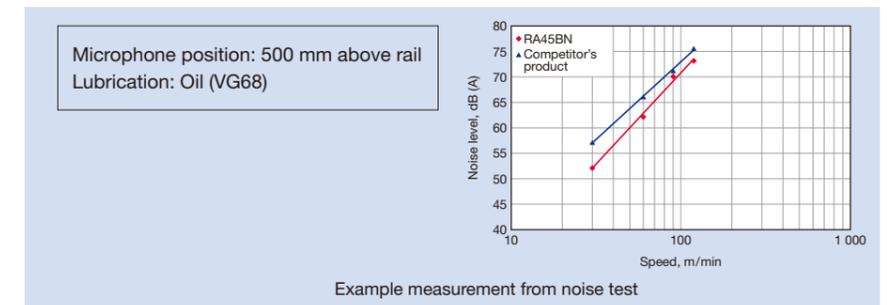

6. Low friction

Using rollers for rolling elements helps minimize dynamic friction.

7. Low noise

A retaining piece is provided between rollers to prevent collisions and minimize noise.

8. Highly dust-resistant, maintenance-free operation

Various roller slides, bolt-hole caps, and rail covers are available as options.

The field-proven NSK K1™ lubrication unit is also available for long-term, maintenance-free operation.

(Availability of options depends on size. For details on dust-resistant specifications, please see page 13.)

Specifications

1. Roller Slide Types and Shapes

- Roller slides are available in square, flanged, and low-profile types. Compact RB models come in low-profile and flanged types, offering even lower height than RA models.
- The mounting holes of the flanged type have a tapped part used to fix the roller slide from the top surface and a tapped minor diameter section for use as bolt holes from the bottom. This allows for mounting from either the top or bottom.
- Roller slide length can be specified as the high load/standard type or the super-high load/long type.

2. Accuracy

Four accuracy grades are available for preloaded assemblies: Ultra precision P3, Super precision P4, High precision P5, and Precision P6. RA model interchangeable types offer High precision PH grade only.

Table 1 Tolerance of preloaded assembly

Characteristics	Accuracy grade			
	Ultra precision P3	Super precision P4	High precision P5	Precision grade P6
Mounting height H	± 8	± 10	± 20	± 40
Variation of H (All roller slides on a set of rails)	3	5	7	15
Mounting width W_2 or W_3	± 10	± 15	± 25	± 50
Variation of W_2 or W_3 (All roller slides on reference rail)	3	7	10	20
Running parallelism of surface C to surface A Running parallelism of surface D to surface B	See Table 3 and Fig. 6			

Unit: μm

Table 2 Tolerance of interchangeable type Unit: μm

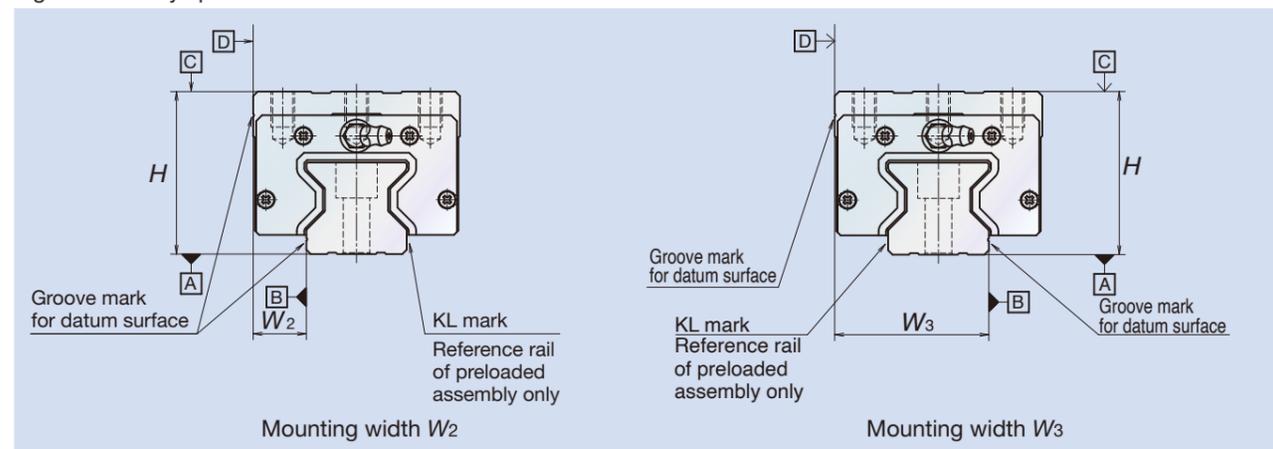

Characteristics	Accuracy grade	High precision PH
Mounting height H		± 20
Variation of mounting height H		15 ①
		25 ②
Mounting width W_2 or W_3		± 25
Variation of mounting width W_2 or W_3		20
Running parallelism of surface C to surface A		See Table 3 and Fig. 6
Running parallelism of surface D to surface B		

Note: ① Variation on the same rail ② Variation on multiple rails

Table 3 Running parallelism Unit: μm

Rail length (mm)	Accuracy grade			
	Ultra precision P3	Super precision P4	High precision P5, PH	Precision grade P6
over - 50 or less	2	2	2	4
50 - 80	2	2	3	4
80 - 125	2	2	3	4
125 - 200	2	2	3.5	5
200 - 250	2	2.5	4.5	6
250 - 315	2	2.5	5	6.5
315 - 400	2	3	5.5	7

630 - 800	2	4	7	9.5
800 - 1 000	2.5	4.5	7.5	10
1 000 - 1 250	3	5	8.5	12
1 250 - 1 600	3.5	5.5	9.5	13
1 600 - 2 000	4	6.5	11	14
2 000 - 2 500	4.5	7.5	12	16
2 500 - 3 150	5.5	8.5	13	18
3 150 - 4 000	6	9.5	14	19

Fig. 6 Accuracy specifications

3. Preload and Rigidity

Medium preload Z3 is available for preloaded assemblies, with slight preload Z1 also available for the RA model only. Medium preload ZH and slight preload ZZ are available for the interchangeable RA model. Typical data for preload and rigidity are shown below.

Table 4 RA model: Preload Unit: N

Model No.	High-load		Super-high-load	
	Slight preload (Z1)	Medium preload (Z3)	Slight preload (Z1)	Medium preload (Z3)
RA15	520	1 030	650	1 300
RA20	960	1 920	1 200	2 400
RA25	880	2 920	1 060	3 540
RA30	1 170	3 890	1 430	4 760
RA35	1 600	5 330	2 020	6 740
RA45	2 780	9 280	3 500	11 600

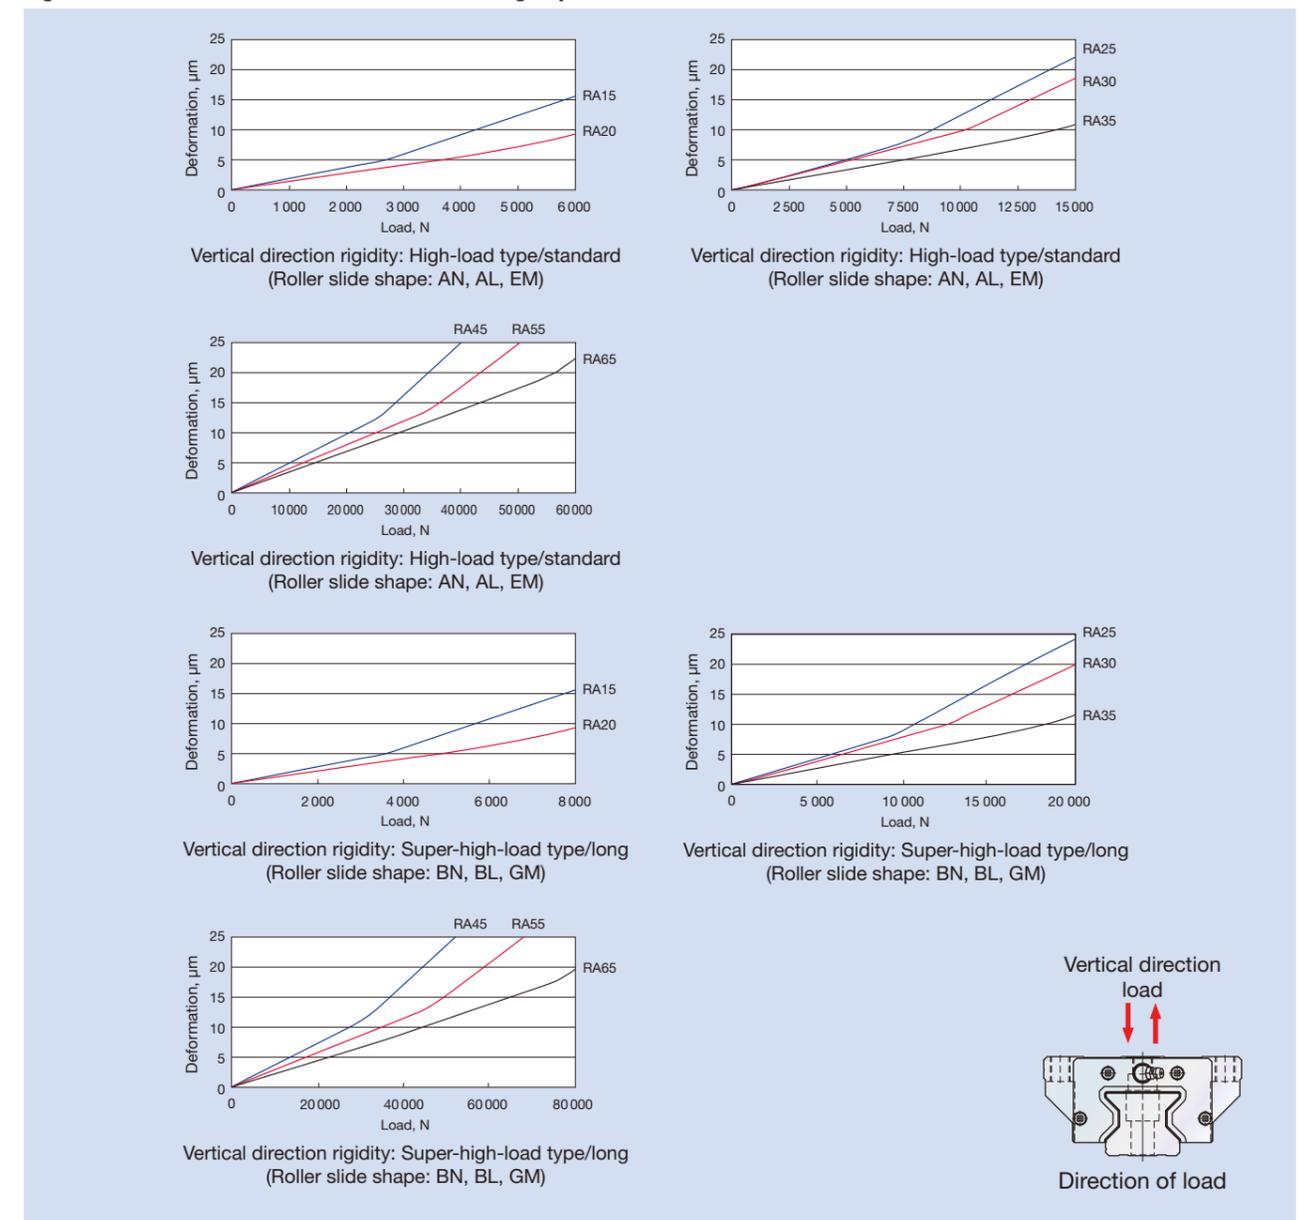

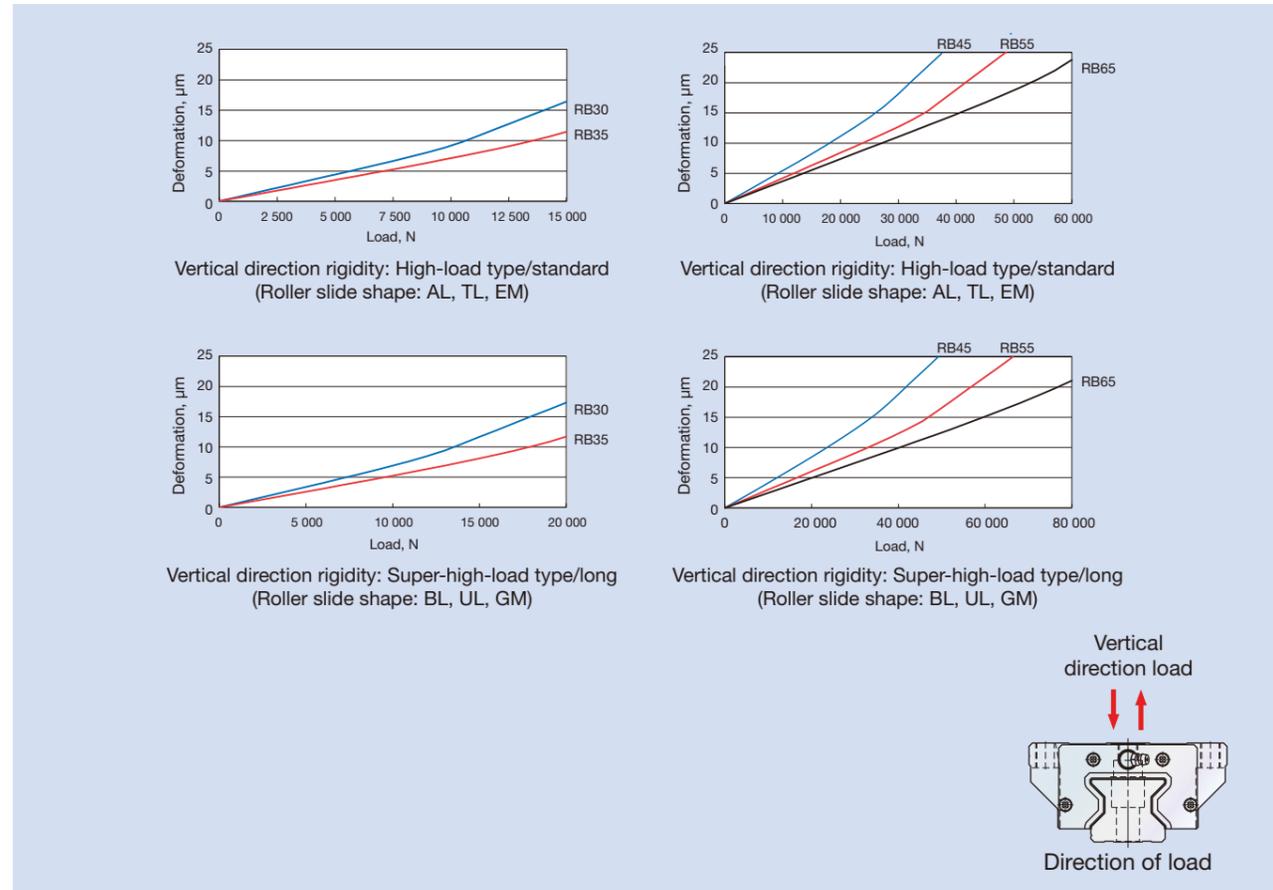

Fig. 8 RB model: Theoretical vertical direction rigidity

4. Basic Load Rating and Rated Life

The basic dynamic load rating used to express the load capacity of a linear guide is determined by ISO standards (ISO 14728-1). The load is specified to not change in amount or direction so that the rating fatigue life is 100 km. The basic load ratings of NSK Linear Guides are based on ISO standards. RA/RB models feature 4-way equal load specifications, making their dynamic load ratings the same in both vertical and lateral directions. The slide's rated fatigue life L can be calculated using the following equation where load F is applied to the roller slide in only one vertical or horizontal direction.

- This life formula is different from that for linear guides with balls as the rolling elements.
- f_w refers to a load factor. Select the appropriate load factor shown in Table 6 based on vibration and impacts on the machine where the linear guide will be used.

$$L = 100 \times \left(\frac{C}{f_w \cdot F} \right)^{\frac{10}{3}} \text{ (km)}$$

Various loads may be applied to the linear guide (i.e., roller slide loads), including vertical loads, lateral loads, and moment loads. Sometimes, more than one type of load will be applied simultaneously or the amount and direction of the load may vary.

Variable loads cannot be used for life calculations of linear guides as they are. Therefore, it is necessary to use an applied hypothetical constant load that would generate a fatigue life equivalent to the actual fatigue life. This is called the dynamic equivalent load. To calculate dynamic equivalent load, use the values provided in Table 7.

Fig. 9 Direction of load

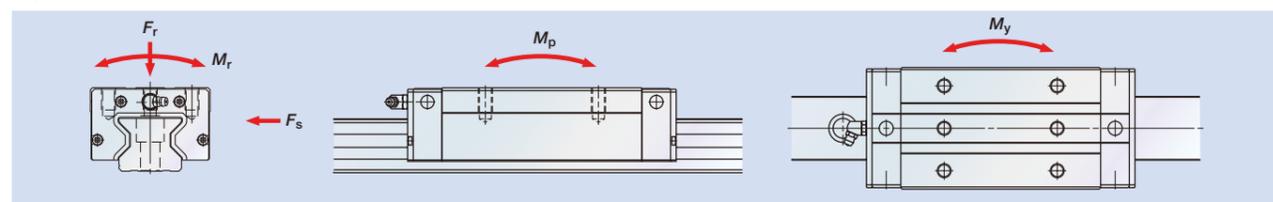

Table 7 Loads by arrangement of linear guide

Pattern	Arrangement of linear guide	Loads necessary to calculate dynamic equivalent load					Dynamic equivalent load
		Load		Moment load			
		Up/down (vertical)	Right/left (lateral)	Rolling	Pitching	Yawing	
1		F_r	F_s	M_r	M_p	M_y	$F_r = F_r$ $F_{se} = F_s \cdot \tan \alpha$ $F_{re} = \epsilon_r \cdot M_r$ $F_{pe} = \epsilon_p \cdot M_p$ $F_{ye} = \epsilon_y \cdot M_y$
2		F_r	F_s	M_r			α : Contact angle ($\approx 45^\circ$) Dynamic equivalent coefficient ϵ_r : Rolling direction ϵ_p : Pitching direction ϵ_y : Yawing direction
3		F_r	F_s		M_p	M_y	
4		F_r	F_s				

After obtaining the dynamic equivalent coefficient in Table 8 or 9, the full dynamic equivalent load can be obtained using the appropriate equation below as determined by the magnitude of the load:

- When F_r is the largest load: $F_e = F_r + 0.5F_{se} + 0.5F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When F_{se} is the largest load: $F_e = 0.5F_r + F_{se} + 0.5F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When F_{re} is the largest load: $F_e = 0.5F_r + 0.5F_{se} + F_{re} + 0.5F_{pe} + 0.5F_{ye}$
- When F_{pe} is the largest load: $F_e = 0.5F_r + 0.5F_{se} + 0.5F_{re} + F_{pe} + 0.5F_{ye}$
- When F_{ye} is the largest load: $F_e = 0.5F_r + 0.5F_{se} + 0.5F_{re} + 0.5F_{pe} + F_{ye}$

The values for dynamic equivalent load in the formulas above should be absolute values that disregard load directions.

5. Lubrication Specifications

(1) Types of lubrication accessories

- Fig. 12 and Tables 11.1 and 11.2 show details on grease fittings and tube fittings.

(2) Mounting positions for lubrication accessories

- The standard position for grease fittings and tube fittings is on the end face of the roller slide. We can mount them on the side of the end cap as an option (Fig. 10). Please consult NSK to install grease or tube fittings to the roller slide body or to the side of an end cap.
- A lubrication hole can also be provided on top of the end cap. In this case, an O ring will be necessary. Fig. 11 and Tables 10.1-10.3 show mounting positions. Some AN/BN slides require spacers, which are available from NSK.
- When using a piping unit with a thread of M6 × 1, a connector is required to connect the piping unit to a grease fitting mounting hole with M6 × 0.75. Connectors are available from NSK.

(3) Oil lubrication precautions

- When oil lubrication is used, the oil may not reach the rolling surface under some roller slide mounting conditions (upside down, wall mountings, etc.) Please consult with NSK before use in these situations.
- When using an oil mist lubricating system, please confirm that a sufficient amount of oil reaches each outlet port.

6. Dust-resistant specifications

(1) Standard specification

RA and RB models are equipped with end, inner¹⁾ and bottom seals to prevent foreign matter from entering the inside of the roller slide. Under normal applications, RA and RB models can be used without modification. For severe usage conditions, optional rail covers are available. Contact NSK for information on how to mount the cover.

Fig. 13 View of roller slide equipped with dust-resistant parts

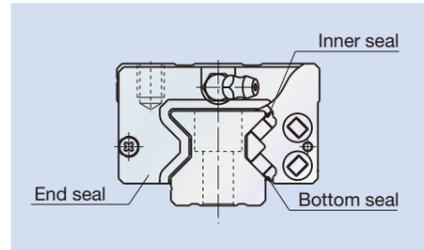

Fig. 14 Rail cover

Table 12 Optional parts for dust resistance

Name	Purpose
NSK K1 lubrication unit	Made of oil impregnated resin. Enhances lubricating functions.
Double seal	Combines two end seals for enhanced seal effectiveness.
Protector	Protects the end seal from hot and hard contaminants.
Rail cap	Prevents foreign matter, such as swarf generated in cutting, from clogging the rail-mounting holes.
Rail cover ²⁾	Covers the rail top surface, and prevents foreign matter, such as cutting dust, from collecting in the rail mounting holes.

1) Inner seals for models RA15 and RA20 are available as an option. 2) Rail covers are available for models RA25 to RA65.

(2) NSK K1™ lubrication unit

Tables 13 and 14 show the dimensions of linear guides equipped with the NSK K1 lubrication unit.

RA30	3.4	3.6
RA35	3.4	3.6
RA45	4	4.2
RA55	4	4.2
RA65	5	5.5

Table 16 Increased thickness of RB model options Unit: mm

Model No.	Thickness of end seal V ₃	Thickness of protector V ₄
RB30	3.4	3.6
RB35	3.4	3.6
RB45	4	4.2
RB55	4	4.2
RB65	5	5.5

(4) Rail cover

Use a cover bracket to fix the rail cover when installing. Fig. 17 shows cover bracket dimensions. The protrusion from the end of the rail will be:

Inside: 10.5 mm or less

Outside: 4 mm or less (models RA25 to RA65)

Please confirm the stroke and space at the rail end in your machine.

Table 17 shows rail height when a rail cover is installed.

Fig. 17 End configuration of rail equipped with rail cover

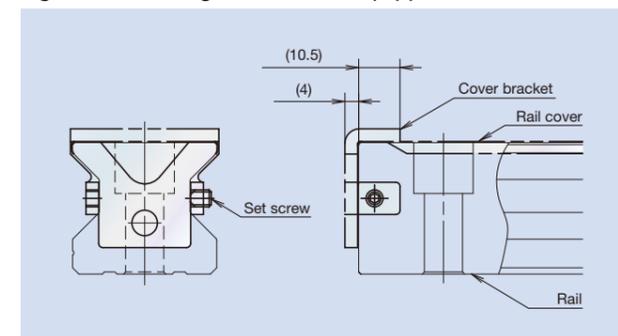

Table 17 Height of rails equipped with rail cover Unit: mm

Model No.	Standard rail height H ₁	Rail height installed with rail cover
RA25	24	24.2

RB55	M14	LG-CAP/M14	
RB65	M16	LG-CAP/M16	

(6) Bellows

Bellows are available for the RA model.

Installation of bellows

Fixing to the roller slide

Remove the two machine screws that secure the end seal. (For RA15, hold the end cap by hand or the end cap may detach from the slide and the rollers may fall out.)

Place a spacer ring on the mounting hole of the end seal and fasten the mounting plate at the end of the bellows using a slightly longer machine screw. (For RA15, place a spacer plate between the end seal and the mounting plate at the end of the bellows.)

Fixing to the rail

First, make tap holes on the rail end surface. Fix the bellows mounting plate to the rail end surface with machine screws through these tap holes. NSK processes tap holes on the rail end surface when a linear guide and bellows are ordered as a set.

Calculating bellows length

The formulas for calculating the length of end bellows are as follows.

Stroke

$$S_t = L_{max} - L_{min}$$

Length when stretched to the maximum

$$L_{max} = f_b \cdot P \times \text{Number of folds}$$

Length when contracted to the minimum

$$L_{min} = 2.5 \times \text{Number of folds} + 3$$

Values for f_b and P are shown in the bellows dimension table. Based on the above formulas, you may calculate the number of folds as follows:

$$\text{Number of folds} = \frac{S_t - 3}{f_b \cdot P - 2.5}$$

Round up the calculated value so that the number of folds will be $n + 0.5$ (n : a natural number). Please contact NSK regarding the length of middle bellows.

If considering bellows for the RB model, please consult with NSK.

Bellows reference number

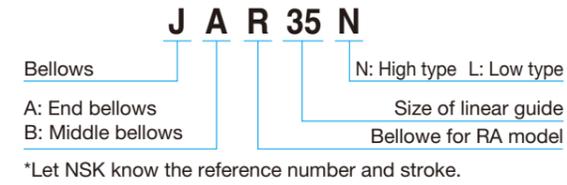

Fig. 18 Bellows dimensions

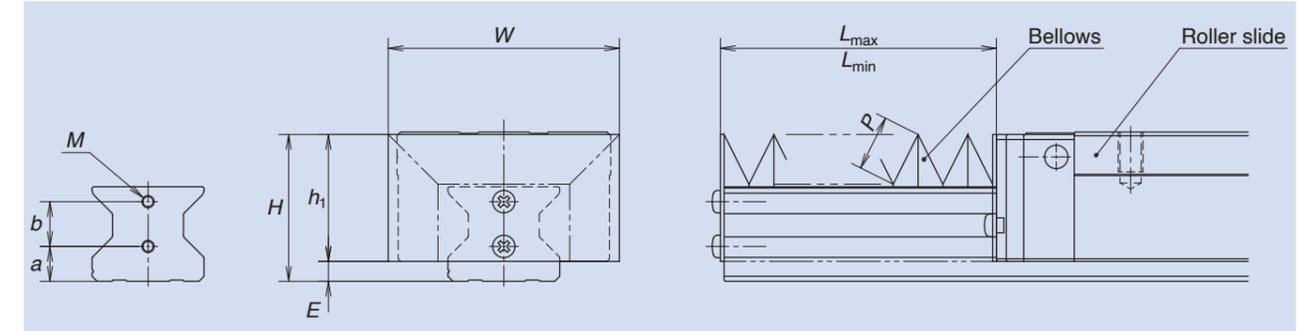

Table 20 Bellows dimensions

Unit: mm (excluding f_b)

Model No.	H	h ₁	E	W	P	f _b	a	b	Tap M × depth

JAR65N	89	76	13	131	30	1.5	21	26	M6x10

Note: f_b is a dimensionless number.

7. Maximum rail length

Tables 21 and 22 show rail length limits (maximum lengths) for a single rail in the RA/RB models; however, note that limits vary by accuracy grade.

Table 21 RA model: Rail length limits

Unit: mm

Size	RA15	RA20	RA25	RA30	RA35	RA45	RA55	RA65
Maximum length	2 000	3 000	3 900	3 900	3 900	3 650	3 600	3 600

Table 22 RB model: Rail length limits

Unit: mm

Size	RB30	RB35	RB45	RB55	RB65
Maximum length	3 900	3 900	3 650	3 600	3 600

Note: Rails can be butted if user requirements exceed the rail length shown in the table. Please consult NSK for details.

8. Installation

(1) Permissible mounting error

Improper mounting results in harmful effects such as shortened operating life, deterioration of motion accuracy, and friction variation.

NSK places a strong focus on operating life—we set permissible mounting error to values where the operating life will be calculated to exceed 10 000 km assuming the following conditions:

- The load per roller slide is 10% of basic dynamic load rating C.
- The rigidity of machine is infinite.

Permissible mounting error is shown in Table 23 using the representative error shown in Fig. 19.

Fig. 19 Permissible mounting error

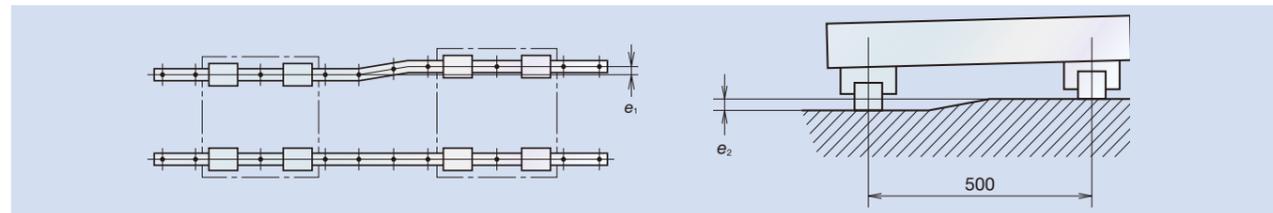

Table 23 RA model: Permissible mounting error

Unit: μm

Value	Preload	Model No.

Value	Preload	Model No.				
		RB30	RB35	RB45	RB55	RB65
Permissible values for parallelism error of two rails e_1	Z3	11	13	17	19	30
Permissible values for height error of two rails e_2	Z3	150 μm /500mm				

(2) Shoulder height and corner radius of mounting surface

Fig. 20 and Tables 25 and 26 show shoulder height and corner radius of the mounting surface when the rail or slide is pressed against the shoulder of the machine base or table (the raised section of the mounting surface) and fixed horizontally.

Fig. 20 Datum faces of roller guide and shoulder

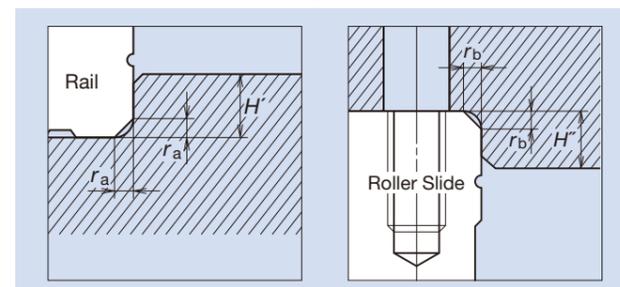

Table 25 RA model: Shoulder height and corner radius of the mounting surface

Unit: mm

Model No.	Shoulder height		Corner radius (maximum)	
	H'	H''	r_a	r_b
RA15	3	4	0.5	0.5
RA20	4	5	0.5	0.5

RA35	5	6	1	1
RA45	6	8	1.5	1
RA55	7	10	1.5	1.5
RA65	11	11	1.5	1.5

Table 26 RB model: Shoulder height and corner radius of the mounting surface

Unit: mm

Model No.	Shoulder height		Corner radius (maximum)	
	H'	H''	r_a	r_b
RB30	5	6	1	1
RB35	5	6	1	1
RB45	6	8	1.5	1
RB55	7	10	1.5	1.5
RB65	8	11	1.5	1.5

Handling Precautions

- ① Operating temperature limits should normally be less than 80°C.
- ② If using NSK K1™, service temperature should not exceed 50°C (or 80°C momentarily). Make sure the unit does not come in contact with organic solvents that can be used for degreasing. Do not place the unit in a location exposed to white kerosene or rust prevention oil containing white kerosene.
- ③ To transfer a slide onto/from a rail, please note the following:
 - Do not remove the roller slide from the rail unless absolutely necessary.
 - When moving the roller slide onto or off of a rail, use the provided provisional rail to prevent dents and scratches on the raceways from excessive force and to prevent the rollers from falling out.
 - Ensure that the bottom and side of the provisional rail are aligned to the rail that the slide will be transferred onto/from and move the slide while butting the end faces of the rails.
 - Use a clean provisional rail. Do not use with a rail that is contaminated with foreign matter or that uses a different type of lubricant.

Square type (tapped mounting holes)

RA-AN (High load/standard), RA-BN (Super-high load/long)
